## **Preface**

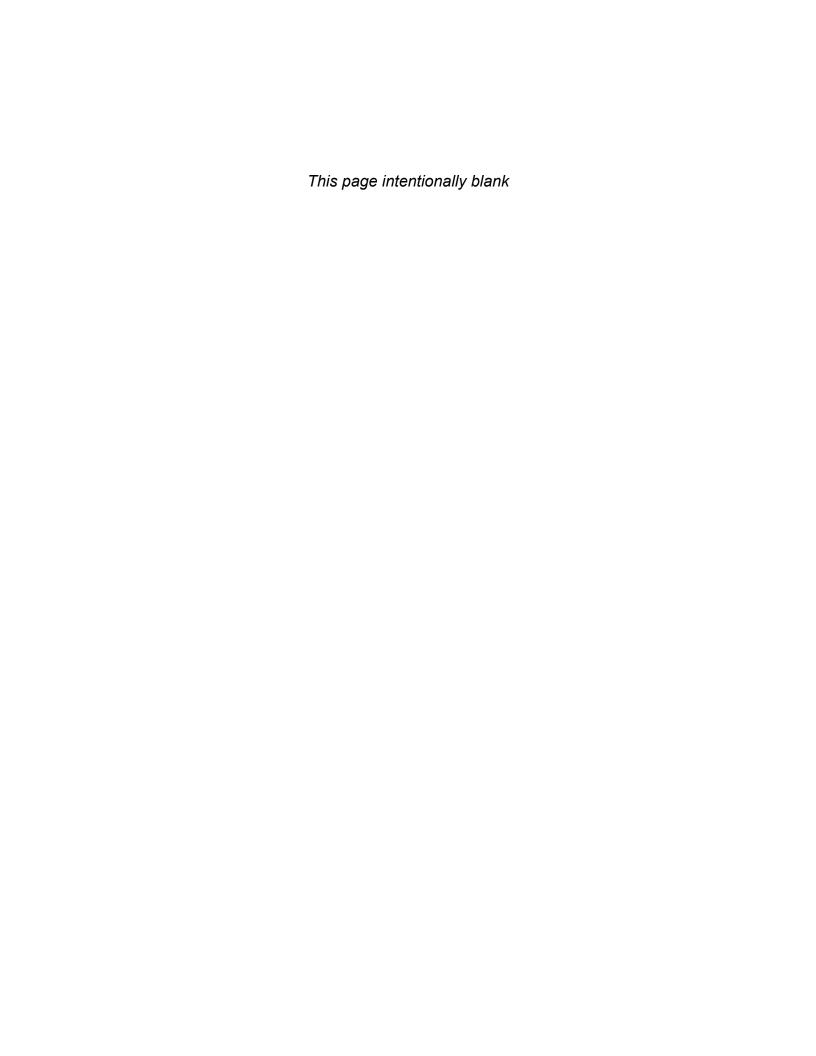

The purpose of this study is to document the economic significance of the travel industry in Wyoming. Detailed estimates of travel spending, the employment and earnings generated by this spending, and travel-generated tax receipts for each of Wyoming's twenty-three counties from 2000 to 2016 are shown in this report. Spending by domestic and international visitors and the secondary earnings and employment impacts of travel spending are provided at the state level. The estimates for 2016 are preliminary and subject to revision.

Dean Runyan Associates prepared this study for Wyoming Travel and Tourism. Dean Runyan Associates has specialized in research and planning services for the travel, tourism and recreation industry since 1984.

Many individuals and agencies provided information and advice for this report. Among the organizations involved in this effort were the Wyoming Department of Revenue, the Wyoming Department of Employment and the Wyoming Division of State Parks and Historic Sites. Federal agencies that provided assistance included the National Park Service, the Department of Labor and the Bureau of Economic Analysis.

Finally, special thanks are due to Diane Shober, Wyoming Office of Tourism Director. Without her support and assistance, this report would not have been possible.

Dean Runyan Associates 833 SW 11th Ave., Suite 920 Portland, OR 97205 (503) 226-2973 www.deanrunyan.com

#### I. INTRODUCTION

Visitors traveling to and throughout Wyoming represent an important component of the state's economy. Travel originating in domestic and international markets generates valuable business sales, payroll, employment and tax receipts for the state as well as for local jurisdictions. Further, many locations within Wyoming serve as travel destinations in their own right, for both Wyoming residents and out-of-state visitors. These areas accordingly consider travel and tourism a primary industry.

### **OBJECTIVES**

This report describes the direct economic impacts of travel to and through the State of Wyoming and each of its 23 counties from 2000 through 2016. This report also includes statewide estimates of spending by resident and non-resident visitors and the secondary employment and earnings impacts associated with travel spending. A primary objective of this research is to provide reliable, detailed estimates, which allow comparisons from year-to-year for the state and county levels. A description of travel impacts estimates is included in Appendix A

### TYPES OF TRAVEL IMPACTS INCLUDED

Most of the travel that occurs in Wyoming is included in the scope of this analysis. All trips to Wyoming by U.S. residents and international visitors are included. The travel of Wyoming residents to other destinations in Wyoming is included provided that it is neither commuting nor other routine travel. Travel to non-Wyoming destinations by Wyoming residents is not included.

The impacts associated with both overnight and day travel are included if the travelers either remain at the destination overnight or the destination was more than fifty miles *one-way* from the traveler's home. These definitions are used to screen and, if necessary, to interpret and adjust local data used for travel impact measurements. The most conservative interpretation is employed where data limitations cause deviations from the above definition.

The terms "traveler" and "visitor" are used interchangeably in this report. Both represent a person who is traveling in Wyoming away from his or her home, on a trip as defined above. The purpose of such travel can be for business, pleasure, shopping, to attend meetings, or for personal, medical or educational purposes.

This analysis focuses on travel and tourism as a component of local and statewide economies and therefore focuses on *destination-specific* impacts. Because air transportation facilities provide travel services that benefit businesses throughout the state, it is appropriate to include air transportation as a component of the travel industry.

However, while the impacts (e.g., employment) associated with air transportation do occur within specific geographic areas, primarily those counties with commercial airport facilities, it is important to recognize, due to the regional character of air travel, that the benefits also extend to those counties that do not provide air transportation.

#### REPORTING FORMAT

The format of the detailed impact tables was developed to provide meaningful industry estimates of earnings and employment and reflects the conversion to the NAICS system now used by the Bureau of Labor Statistics (BLS) to report payroll statistics and by the Bureau of Economic Analysis (BEA) to report earnings and total employment\*. Prior to 2001, the 1997 Standard Industrial Classification (SIC) was the reporting scheme used by federal and state agencies.

The first three sections, *Visitor Spending by Type of Traveler Accommodation, Visitor Spending by Commodity Purchased* and, *Total Direct Travel Spending* describe classifications of visitor spending.

- Visitor Spending by Type of Traveler Accommodation refers to the total direct spending of each category of visitor at that destination (county or state). For example, the spending of visitors that stayed at hotels, motels, resorts, or B&B's includes their spending on accommodations, food & beverage service, recreation and all other visitor related commodities.
- Visitor Spending by Commodity Purchased refers to the total spending on each commodity for all types of visitors. For example, the total spending on Food & Beverage Services includes spending by visitors staying, in hotels, private campgrounds, private homes and the other types of accommodation. The total spending on commodities is identical to the total spending by type of accommodation.

<sup>\*</sup> The NAICS industries that comprise travel impact industries are defined in Appendix C.

• *Total Direct Travel Spending* includes the total visitor spending at destination, described above, plus spending on air transportation. Total direct travel spending does not include secondary (indirect and induced) effects.

The next two sections, *Direct Travel-Generated Earnings by Industry* and *Direct Travel-Generated Employment by Industry*, provide estimates of travel-generated earnings and employment that are based on an industry, rather than a commodity, classification. A business that is classified in a particular industry may include more than one commodity. For example, a resort that is classified in the accommodation industry may provide accommodations, food and beverages, and recreation.

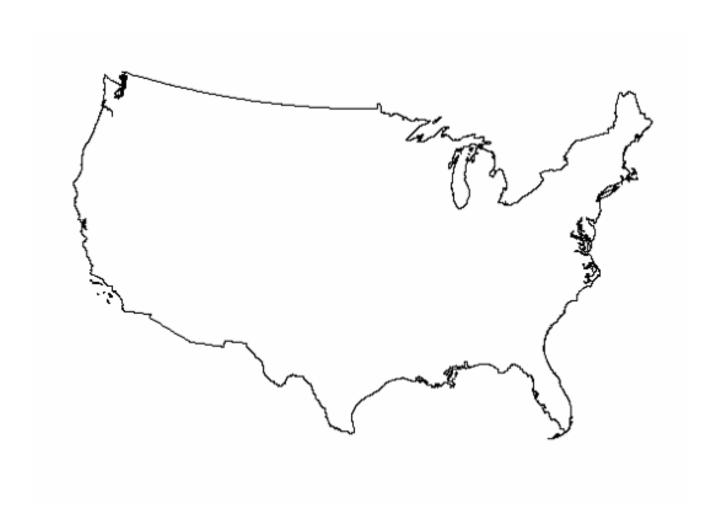

- *Direct Travel-Generated Earnings by Industry* includes the payroll, other earned benefits, and proprietor income of all employees in that industry classification.
- · Direct Travel-Generated Employment by Industry includes all full- and part-time employees. This includes payroll employees covered by unemployment insurance and those that are not, as well as proprietors.

The final section, *Tax Revenues Generated by Travel Spending*, is identical to last year's report. Local taxes include room taxes, local sales taxes, and the local share of state taxes. State taxes include the state share of the sales tax and the state motor fuel tax.

#### REPORT CONTENTS

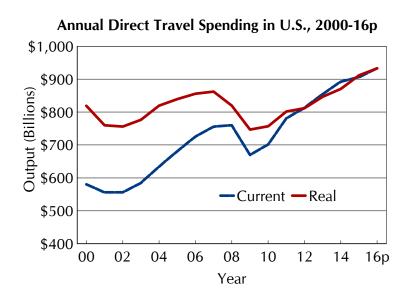

Section II provide an overview of U.S. Travel trends. Section III provides an overview of Travel Impacts in the state, as well as detailed estimates for 2000 through 2016. Section IV provides summary and detailed tables for each of Wyoming's twenty-three counties. A description of the methodology is included in Appendix A. Definitions of the travel terms used in this report can be found in Appendix B. Appendix C provides a listing of the relevant business classifications (NAICS codes) used to represent travel industry businesses. The method for deriving secondary impacts is discussed in greater detail in Appendix D. Appendix E provides a detailed listing of the industries used in the secondary impact analysis.

# II. U.S. Travel

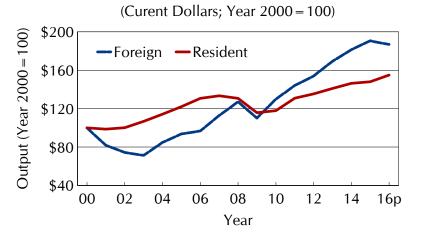

The national level data in this section focuses on visitor spending trends in current and real dollars, resident and foreign visitor spending in the U.S., and trends in travel-generated employment.

The following two graphs are derived from the Bureau of Economic Analysis Travel and Tourism Satellite Accounts\*. Both graphs show direct tourism output for the United States - spending by resident and foreign visitors. The 2016 values are preliminary.

Spending by resident and foreign visitors was \$933 billion in 2016 in current dollars. This reflects 3 percent increase over 2015. When adjusted for changes in prices (real dollars), spending increased by 2.3 percent from 2015 to 2016 - compared to a 4.7 for the preceding year.

# Spending by Foreign and Resident Travelers in U.S.

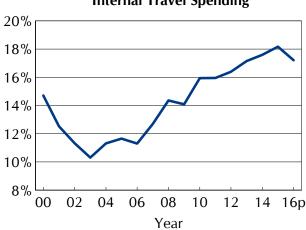

Note: Foreign visitor spending does not include expenditures on health and educational services or expenditures by short term seasonal workers.

\*See http://www.bea.gov/industry/index.htm#satellite.

The bottom chart compares the change in current dollar spending by resident and foreign visitors since 2000. In 2016, the increase in spending by resident visitors (4.7 percent) exceeded the increase in foreign visitor spending (-2.0 percent). This is the first year since 2009 when resident spending growth was greater than foreign.

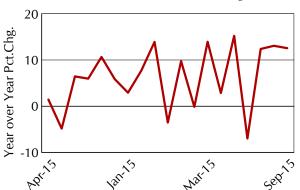

# Foreign Share of U.S. Internal Travel Spending

The foreign share of U.S. internal travel declined by almost a full percent point from 2015 to 2016 (18.2 percent to 17.2 percent). This has been due to two factors. First, overseas arrivals began to show a decreasing rate of growth in the beginning of 2016 and actually declined in absolute numbers in the most recently reported months.

#### **Overseas Arrivals**

Secondly, the value of foreign currencies has fall relative to the U.S. dollar. This not only discourages travel to the U.S., but also means that foreigners that do travel to the U.S. have less money to spend on goods and services.

# Relative Value of Selected Foreign Currencies compared to U.S. Dollar

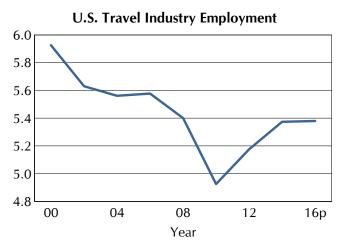

# 

#### Sources:

Foreign Share of U.S Internal Travel: Bureau of Economic Analysis Travel & Tourism Satellite Accounts and International Transactions.

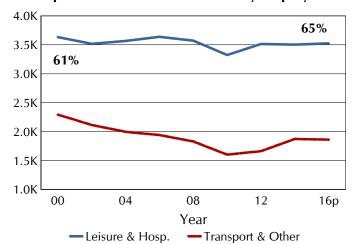

Overseas Arrivals: Office of Travel and Tourism Industries, U.S. Department of Commerce. Note: Arrivals for 2014 and 2015 are somewhat greater than preceding years due to a change in processing methodology.

Relative Value of Selected Foreign Currencies: USForex, Inc. (www.usforex.com) The following two graphs show employment trends since 2000. The first graph shows that travel-generated employment has increased at a steady rate since 2010. Travel industry employment has now recovered to the level immediately preceding the 2008-09 recession, although it is still below its peak earlier in that decade. Part of the reason for this is shown in the second graph. Leisure and hospitality employment was 3.5 million in 2016 or 65 percent of total travel industry employment, compared to 3.6 million in 2000 or 61 percent of the total. Most of this growth was due to food services employment. However, employment in transportation and other industries declined over the same period from 2.3 million to 1.8 million, mostly due to decreased employment in the airline and related transportation industries.

### Components of U.S. Travel Industry Employment

Source: Bureau of Economic Analysis Travel & Tourism Satellite Accounts. Leisure & hospitality includes accommodations, food services, and arts, entertainment & recreation. Transportation and other includes retail and all other industries.

# III. Wyoming Travel Impacts 2000 - 2016

The travel industry is an important sector of the Wyoming economy. In some areas of the state, it is one of the major industries. This section provides an overview of travel in the state from 2000 through 2016. Detailed travel impacts are provided in the table that concludes this section.

#### STATE SUMMARY: DIRECT IMPACTS OF TRAVEL IN WYOMING

- Travel spending by all domestic and international visitors in Wyoming was approximately \$3.2 billion in 2016. This is equivalent to approximately \$8.9 million dollars per day.
- Overall, travel spending in Wyoming has increased 4.3 percent per year since 2000. In constant dollars (adjusted for inflation), travel spending has increased by about 2.7 percent per year over the same period.
- Visitors who stayed overnight in commercial lodging facilities spent \$1.8 billion in 2016 more than half (58%) of all visitor spending in the state. Visitors who stayed in public and private campgrounds spent \$563 million, or about 18 percent of all visitor spending.
- During 2016, travel spending in Wyoming directly supported approximately 32,000 jobs with travel-generated earnings of \$894 million. Travel spending generated the greatest number of jobs in accommodations, recreation, and food service industries.
- Local and state tax revenues generated by travel spending were about \$171 million in 2016 (property taxes not included). Without these travel generated tax revenues, each household in Wyoming would have had to pay an additional \$730 in taxes per year to maintain these current state and local tax revenues.

The following table and charts document these travel impacts. Detailed travel impact estimates for the state from 2008 to 2016 are found on page 17.

Note: Details may not add to totals due to rounding.

**Earnings** include wages & salaries, earned benefits and proprietor income.

**Employment** includes all full- and part-time employment of payroll employees and proprietors.

**Local tax revenue** includes lodging and sales taxes paid by visitors.

State tax revenue includes sales and motor fuel tax payments of visitors.

**Federal tax revenue** includes motor fuel excise taxes and airline ticket taxes, and the payroll and income taxes attributable to the travel industry income of employees and businesses.

<sup>\*</sup>Non-transportation travel spending does not include motor fuel purchases and air travel.

#### IMPACT OF MOTOR FUEL PRICES ON THE WYOMING TRAVEL INDUSTRY

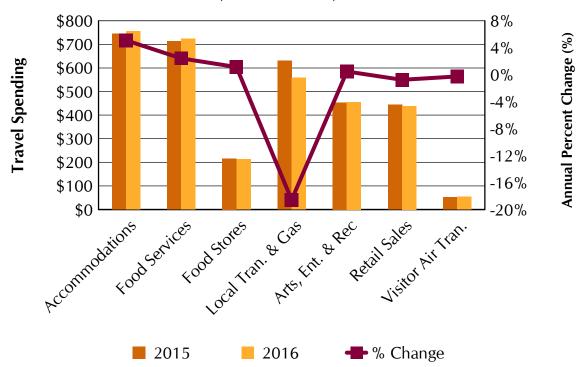

In 2016, Wyoming Travel Spending declined -1.6% over 2015. This was driven by lower motor fuel prices within the transportation segment (motor fuel and visitor air travel) equal to \$613 million of travel spending in 2016 vs. \$683 million in 2015 (shown below). These declines are primarily tied to the price of oil per barrel vs. the sales volume of visitor-related motor fuel (consumption).

Non-transportation travel spending (shown below) grew by 0.6 percent over 2015.

# **Wyoming Travel Spending by Commodity Purchased**

(2016 vs. 2015)

#### VISITORS IMPACTS TO WYOMING BY VISITOR RESIDENCE

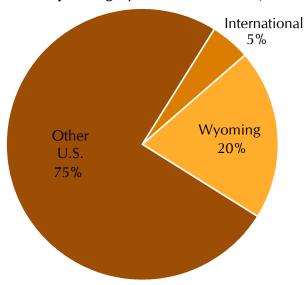

U.S. residents of states other than Wyoming accounted for approximately three-quarters of all travel spending in Wyoming in 2016. Residents of Wyoming accounted for 20 percent, while international visitors accounted for about 5 percent of travel spending in the state. Detailed estimates by visitor residence are reported in the following table for spending, earnings, employment, and tax receipts (local, state, and federal).

Travel Impacts by Visitor Residence, 2016

	Wyoming	Other U.S.	International	All Visitors
Spending (\$Million)	655	2,430	154	3,240
Earnings (\$Million)	1 <i>7</i> 1	677	46	894
Employment (Jobs)	6,200	23,970	1,590	31,770
Local Taxes (\$Million)	13	53	4	<i>7</i> 1
State Taxes (\$Million)	21	74	4	100
Federal Taxes (\$Million)	25	103	6	135
Total Taxes (\$Million)	60	231	15	306

Source: Dean Runyan Associates, Longwoods International and U.S. Department of Commerce (Bureau of Economic Analysis and International Trade Administration). Details may not add to totals due to rounding.

**Travel Spending by Visitor Residence, 2016** 

International visitor impacts for Wyoming were derived from the U.S. International Transactions by area of origin estimates prepared by the Bureau of Economic Analysis (BEA) and the origin and destination profiles of international visitors reported by the International Trade Administration (ITA)\*. The related employment and tax impacts of international visitors to Wyoming were derived from the travel impact estimates prepared by Dean Runyan Associates.

<sup>\*</sup>Both BEA and ITA are agencies of the U.S. Department of Commerce.

#### **SECONDARY IMPACTS**

Travel spending within Wyoming brings money into many Wyoming communities in the form of business receipts. Portions of these receipts are spent within the state for labor and supplies. Employees, in turn, spend a portion of their earnings on goods and services in the state. This re-spending of travel-related revenues creates *indirect* and *induced impacts*. To summarize:

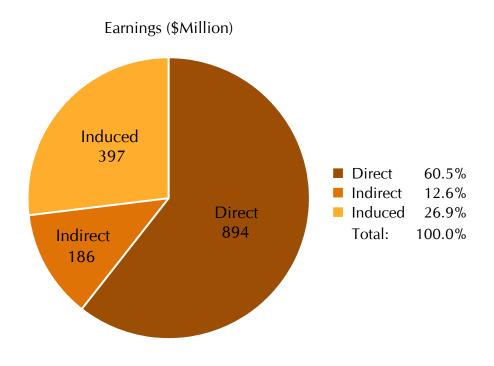

- **Direct** impacts represent the employment and earnings attributable to travel expenditures made directly by travelers at businesses throughout the state.
- **Indirect** impacts represent the employment and earnings associated with industries that supply goods and services to the direct businesses (i.e., those that receive money directly from travelers throughout the state).
- **Induced** impacts represent the employment and earnings that result from purchases for food, housing, transportation, recreation, and other goods and services made by travel industry employees, and the employees of the indirectly affected industries.

The impacts in this section are presented in terms of the employment and earnings of eleven major industry groups. These industry groups are similar, but not identical to the business service (or commodity) categories presented elsewhere in this report. (The specific industries that comprise these groups are listed in Appendix E.) Direct travel impacts, such as those discussed in the first part of this section and the county impacts presented elsewhere in this report are found in the following industry groups:

- Accommodation & Food Services
- · Arts, Entertainment, and Recreation
- · Retail Trade
- · Transportation

# **Total Employment and Earnings Generated by Visitor Spending in Wyoming, 2016**

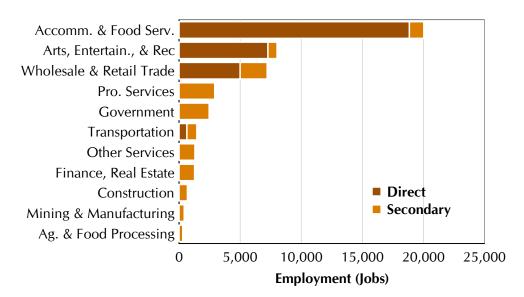

The indirect and induced impacts of travel spending are found in all eleven-industry groupings shown in the following tables and graphs. The remainder of this section summarizes the secondary impacts of travel spending in the primary industry groups.

- **Professional Services** (2,922 jobs and \$134 million earnings). Legal, medical, educational and other professional services are utilized by travel businesses (indirect effect) and by employees of these firms (induced effect).
- Other Services (1,291 jobs and \$38 million earnings). Employees of travel-related businesses purchase services from various providers, such as dry cleaners and repair shops. Similarly, travel businesses utilize a number of service providers, such as laundry, maintenance, and business services.
- **Government** (2,464 jobs and \$132 million earnings). Employees of travel-related businesses pay taxes and fees to attend public educational institutions and to operate motor vehicles.
- Wholesale and Retail Trade (2,223 jobs and \$81 million earnings). Employees of travel-related businesses spend a portion of their earnings on food, clothing, and other household goods from local businesses.
- **Finance, Insurance, & Real Estate** (1,266 jobs and \$33 million earnings). Employees and businesses use the services of financial institutions, insurers, and real estate businesses.

Detailed estimates are reported in the following graphs and tables. It should be emphasized that the estimates of indirect and induced impacts reported here apply to the entire state of Wyoming and do not necessarily reflect economic patterns for individual counties, regions or sub-regions within the state. While total economic impacts can be calculated on a county or regional level, such a detailed analysis is not included in this study. In general, geographic areas with lower levels of aggregate economic activity will have smaller secondary impacts within those same geographic boundaries.

# IV. County Travel Impacts 2000 - 2016

This section provides detailed county estimates, as well as a number of summary tables, for the years 2000 to 2016. In interpreting these estimates, readers are advised that:

- All monetary values are expressed in *current* dollars (no inflation adjustment).
- The estimates measure <u>direct</u> impacts only. Secondary impacts are reported at the state level for employment and earnings.
- In general, estimates of counties with small populations and economies are less reliable than estimates for more populous and economically diverse areas.
   Trend analysis and comparisons of counties with relatively low levels of travel related economic activity should therefore be interpreted cautiously.

In addition to the detailed county estimates, two indicators of the relative importance of visitor spending in counties are provided. The first is a comparison of travel-generated employment with total employment. The estimates of total employment are taken from the Bureau of Economic Analysis, U.S. Department of Commerce and Bureau of Labor Statistics, U.S. Department of Labor (these estimates are for 2015). The second indicator is a comparison of estimates of travel-generated state tax receipts with state sales tax distributions for 2016.

It is important to emphasize that these indicators should be interpreted with care. Estimates for areas with low levels of economic activity are generally less reliable than estimates for larger local economies. This is even more the case for the indicators provided in this section. The employment figures provided by the Bureau of Economic Analysis are themselves <u>estimates</u>. It should also be noted that these estimates measure the total number of jobs (including self-employment) in an area, not the number of residents that work.

The sales tax distribution totals figures provided by the Wyoming Department of Revenue will be influenced by the particular business make-up of the locale. As with travel-oriented businesses, some of the sales of these businesses may originate with purchases of residents of other counties. For these and other reasons, the measures provided in this section are general indicators that should be used in conjunction with other measures of local economic activity.

Travel spending less transportation does not include gasoline purchases and air travel. Total Earnings includes wage and salary disbursements, other earned income and proprietor income. Employment includes payroll employees and proprietors. Tax receipts include local option lodging and sales taxes, state sales tax and the gasoline tax. State sales taxes are allocated to local government (31 percent) and the state (69 percent). Property taxes are not in cluded.

## **APPENDICES**

Appendix A. Travel Impact Estimates

Appendix B. Definition of Terms

Appendix C. Visitor Volume and Average Expenditures

Appendix D. Regional Travel Impact Model

Appendix E. Travel Industry Accounts: A comparison of the Regional Travel Impact Model and Travel & Tourism Satellite Accounts This page intentionally blank

#### TRAVEL IMPACT ESTIMATES

This appendix provides a brief overview of the methodology and limitations of the travel impact estimates.

#### **DIRECT IMPACTS**

The estimates of the direct impacts associated with traveler spending in Wyoming were produced using the Regional Travel Impact Model (RTIM) developed by Dean Runyan Associates. The input data used to detail the economic impacts of the Wyoming travel industry were gathered from various local, state and federal sources.

Travel impacts consist of estimates of travel spending and the employment, earnings, and state and local taxes generated by this spending. These estimates are also broken out by type of traveler accommodation and by the type of business in which the expenditures occur.

## **SECONDARY (INDIRECT AND INDUCED) IMPACTS**

Direct impacts are reported for all counties within Wyoming. Secondary employment and earnings impacts over and above direct impacts are reported at the state level only for the year 2015. These indirect and induced impacts are generated from the direct impacts produced by the RTIM, discussed above, and an input-output model of the Wyoming economy prepared by IMPLAN Group, LLC.

Indirect impacts represent the purchases of goods and services from other firms by businesses that directly receive expenditures from travelers. Hotels, for example, purchase maintenance services from independent contractors.

Induced impacts represent the purchase of goods and services by employees whose earnings are in part derived from travel expenditures. The sum of the direct, indirect and induced impacts equals the total impact of all spending by visitors in the state. The "multiplier" refers to the ratio of the total impacts to the direct impacts for employment or earnings.

## **IMPACT CATEGORIES**

The specific categories of travel impacts included in this analysis are as follows:

Impact Category	Description
Expenditures	Purchases by travelers during their trip, including lodging taxes and other applicable local and state taxes paid by the traveler at the point of sale.
Total Earnings	The wage and salary disbursements, earned benefits of employees and proprietor income of business owners who work in travel-related businesses. Only the earnings that are attributed to travel expenditures are included.
Employment	All employment associated with the above earnings. This includes wage and salary workers and proprietors, and full- and part-time positions. The employment estimates are not full time equivalents (FTE's).
Local Tax Receipts	Tax receipts collected by counties and municipalities, as levied on applicable travel-related purchases. Consists of local option lodging taxes, local sales taxes and other local use taxes. The local share (31 percent) of state sales taxes are included. Property taxes are not included.
State Tax Receipts	State sales taxes (including tax receipts distributed to local governments) and gasoline taxes attributable to travel expenditures. Only the state share (69 percent) of state sales taxes are included.

#### **VISITOR CATEGORIES**

Travelers are classified according to the type of accommodation in which they stay. The types of accommodations are as follows:

Type of Accommodation	Description
Hotel, Motel, Resort, B&B	Travelers staying in hotels, motels, resorts, guest ranches, bed & breakfast establishments, and other commercial accommodations where sales or lodging taxes are collected.
Private Campground	Travelers staying in a privately owned (i.e., commercial) campground.
Public Campground	Travelers staying in publicly managed campgrounds such as those managed by the Wyoming Division of State Parks and Historic Sites or the National Park Service.
Private Home	Travelers staying as guests with friends or relatives.
Vacation Home	Travelers using their own vacation home or timeshare and those borrowing or renting a vacation home where sales or lodging taxes are not collected.
Day Visitor	Both in-state and out-of-state residents whose trip (at least 50 miles one way) does not include an overnight stay at a destination in Wyoming.

#### **INTERPRETATION OF IMPACTS ESTIMATES**

Users of this report should be aware of several issues regarding the interpretation of the impact estimates contained herein:

- The estimates in this report are expressed in *current* dollars unless otherwise noted.
- When comparing the impact estimates associated with different locations or different time periods, it is more appropriate to focus on *destination spending* (which excludes air transportation) rather than total travel spending.
- In general, estimates of geographic units with small populations and economic
  activity (e.g., rural counties) are less reliable than estimates for more populous and
  economically diverse areas. Trend analysis and comparisons of counties with
  relatively low levels of travel related economic activity should therefore be
  interpreted cautiously.

#### **RELATED TRAVEL IMPACTS**

## Hotel, Motel, Resort, B & B.

Spending on commercial accommodations is estimated from applicable local lodging tax receipts and state sales tax receipts. Spending by hotel, motel and resort guests in other business categories, such as food and transportation, is estimated using spending distributions reported in the visitor survey data. The spending distribution shows how travelers divide their spending between lodging and other purchases.

**Private Campground**. Spending by campers using commercial campgrounds is estimated from the number of commercial campsites, the average occupancy of these campsites, and the average daily expenditures of visitor camp parties reported in survey data. Spending in other business categories is estimated in the same way as for hotel guests.

**Public Campground**. Spending by campers using public campgrounds is estimated from visitor counts at national and state parks and recreation areas, and daily spending estimates from the visitor survey.

**Private Home**. Spending by private home guests is determined from visitor survey data estimating the number of visitors staying as guests of friends and relatives and applying these rates to the household population base in individual counties.

**Vacation Home**. Estimated spending by vacation home renters and owners (where no lodging or sales tax is collected) is based on the inventory of vacation homes (2010 U.S. Census) expenditure survey data of vacation home visitors that made trips of 30 days or less.

Note: The visitor spending distributions and daily spending estimates referenced above are established based on all readily available survey data, and adjusted annually based on price indices by type of commodity.

**Air Transportation.** Visitor spending estimates for air transportation are derived from the Origin-Destination survey conducted for the Bureau of Transportation Statistics. Employment and earnings estimates are derived from industry receipts, payroll, and employment data for passenger traffic. The impacts of air cargo operations on scheduled passenger flights are not included in these estimates.

**Earnings** generated directly from traveler expenditures is estimated from the payroll-to-receipts ratios derived from the 2012 Economic Census and earnings data provided by the Bureau of Economic Analysis (U.S. Department of Commerce).

**Employment** in each business category is calculated from wage data provided by the Wyoming Department of Labor and Employment and earnings data provided by the Bureau of Economic Analysis.

#### **DEFINITION OF TERMS**

#### **ECONOMIC IMPACTS**

**Accommodation:** Spending for lodging by hotel and motel guests, campers and vacation home users.

**Air Transportation**: Air passenger spending attributable to travelers in and to Wyoming. The spending total includes air travel spending made outside Wyoming for travel to Wyoming as a final destination, purchases by Wyoming residents who travel outside the state, and air travel within the state.

**Campers:** Travelers staying at RV parks and commercial campgrounds or at public campgrounds such as those in state and national parks.

**Destination Spending:** Spending by travelers at or near their destinations. This excludes spending on air transportation and travel agent commissions. All automobile operating expenses are included in the ground transportation component of destination spending.

**Earnings:** Total earnings include wage and salary disbursements, other earned income, and proprietor income. Only the earnings attributable to travel expenditures are included.

**Food and Beverage Services:** Businesses serving food and beverages for immediate consumption. In addition to table service restaurants, this category includes fast-food outlets and refreshment stands.

**Employment:** Industry employment (jobs) associated with the travel-generated payroll and proprietors. This includes both full- and part-time positions.

**Expenditures:** Purchases by travelers during their trip, including lodging taxes and other applicable local and state taxes paid by the traveler at the point of sale.

**Food Stores:** Grocery stores, supermarkets, fruit stands, retail bakeries, and other businesses selling food for consumption off the premises.

**Ground Transport:** Spending on car rentals, gasoline and other vehicle operating expenses and on local transportation such as taxi, bus and train.

**Hotel, Motel, Resort Guests:** Travelers staying in hotels, motels, guest ranches, resorts, bed & breakfast establishments, condominiums and other lodging places where a lodging or sales tax is collected.

**Local Tax Receipts:** Tax revenue collected by counties and municipalities, as levied on applicable travel-related businesses. Consists of hotel occupancy taxes and other local use taxes (e.g., automobile rentals).

**Lodging Tax:** A local tax charged on lodging. Also referred to as room tax, transient lodging tax, or bed tax.

**Private Home Guests:** Travelers staying as guests with friends or relatives.

**Receipts:** Travel expenditures less the sales and excise taxes imposed on those expenditures. Also referred to as business receipts.

**Recreation:** Spending on entertainment and recreation, such as admissions to tourist attractions or artistic events.

**Retail Sales:** Spending for gifts, souvenirs and other items. Excludes spending listed separately, such as food stores or recreation.

**Spending Distributions:** Information from visitor surveys showing how spending by each type of visitor is divided among various business categories.

**State Tax Receipts:** State sales taxes, motor fuel taxes, and income taxes on visitor generated earnings and business income.

**Travel:** An overnight trip that is not of a local or commuting nature. Travel may be for business or pleasure purposes.

**Traveler:** A person traveling in Wyoming. A traveler may be a Wyoming resident or a resident of another state. The terms traveler and visitor have the same meaning in this report.

**Vacation Home User:** Travelers using their own vacation home or timeshare and those renting a vacation home or privately owned cabin where a lodging or sales tax is not collected. Vacation home users are limited to stays of thirty days.

### **VISITOR VOLUME**

**Length of Stay:** The number of nights that a visitor or travel party is away from home on a trip.

**Night:** Applies to overnight visitors only. The number of nights on a trip is the length of stay. The count of days and nights is generally equivalent for overnight visitors. (See trips.)

**Party-trips:** The number of trips to the destination by travel parties. Party-trips are equal to the number of Visitor-trips divided by the average party size.

**Party-nights:** The number of nights or days that travel parties stayed at the destination. Party-nights are equal to the number of visitor-nights divided by the average party size or the number of party-trips multiplied by the average length of stay.

**Party Size:** The number of individuals (adults and children, including non-household members) that are traveling together and are sharing the costs of travel.

**Room Demand:** A count of the number of hotel/motel rooms that are sold on a nightly basis over a given period of time. Also referred to as *room nights sold*.

**Travel party:** A *travel party* includes all *visitors* (adults and children) traveling together. The *party size* represents the average number of visitors or persons in the travel party.

**Trip:** A trip may include more than one day or night at a destination. For overnight visitor categories, the total number of trips will be less than the number of nights. The *length of stay* for the trip represents the number of nights (or days) at the destination.

**Visitor:** An individual traveler that stays overnight away from home in paid or unpaid accommodations, or a day visitor that travels at least fifty miles one-way from home on non-routine trip.

**Visitor Air Arrival:** A passenger who travels by air and initiated the trip at another location. Visitor air arrivals do not include passengers who are returning home from a trip to another destination or passengers that are making a connection to another flight.

**Visitor-trips:** The number of trips to the destination by visitors or persons. This is also equivalent to as the total number of *visits*.

**Visitor-nights:** The number of nights or days that visitors (persons) stayed at the destination. Visitor-nights are equal to the number of visitor-trips multiplied by the average length of stay.

## **Overnight Visitor Volume and Average Spending**

Overnight visitor volume figures are based on total spending by type of accommodation shown in this report along with other source data, including average daily room rates, and U.S. census data for private and vacation homes. Day travel estimates are not provided because of data limitations.

Although volume estimates derived from different methodologies and source data will necessarily vary to some extent, it should be noted that the overnight volume estimates reported here are consistent with other data, such as room demand, visitor air travel, and other visitor surveys.

The Spending, Average Expenditures and Volume tables are computationally related as shown with the sample data below:

- **Spending** *equals* **Average Expenditures** *multiplied by* **Volume** for comparable party/person and night/trip categories
- Travel parties and persons are related by division or multiplication with Party Size
- Trips and nights are related by division or multiplication with Length of Stay

## Visitor Spending by Type of Accommodation (\$Million), YEAR

		YEAR
All Overnight	$656,000 \times \$86 = \$56,100,000$ (calculated from person-trips)	56.1
Hotel, Motel	$160,000 \times $200 = $32,000,000 $ (calculated from party-nights)	32.0
Private Home	$1,030,000 \times \$20 = \$20,600,000$ (calculated from person-nights)	20.6
Other Overnight	$10,000 \times $350 = $3,500,000$ (calculated from party-trips)	3.5
Campground		3.0
Vacation Home		0.5
Day Travel		30.0
Spending at Destination		86.1

# **Example:**

# Average Expenditures for Overnight Visitors, YEAR

	Travel Party		Visitor (Person)		Party	Length of
	Nights	Trip	Nights	Trip	Size	Stay (nights)
Hotel, Motel	\$200	\$340	\$83	\$142	2.4	1.7
Private Home	\$50	\$130	<i>\$20</i>	\$52	2.5	<u>2.6</u>
Other Overnight	\$11 <i>7</i>	<b>\$350</b>	\$34	\$103	3.4	3.0
All Overnight	\$494	\$214	\$197	\$86	2.5	2.3

# Overnight Visitor Volume, YEAR

	Visitor-Nights (000)		Party-Nights (000)
		YEAR	YEAR
Hotel, Motel	$160 \times 2.4 =$	384	160
Private Home		1,030	412
Other Overnight		102	30
All Overnight		1,516	602

	Visitor-Trips (000)		Party-Trips (000)
		YEAR	YEAR
Hotel, Motel		226	94
Private Home	1,030 / 2.6 =	396	158
Other Overnight		34	10
All Overnight		656	263

## REGIONAL TRAVEL IMPACT MODEL

# TRAVEL INDUSTRY ACCOUNTS: A COMPARISON OF THE REGIONAL TRAVEL IMPACT MODEL AND TRAVEL & TOURISM SATELLITE ACCOUNTS

An economic account is a method for displaying inter-related information about a set of economic activities. A travel industry account is a method to report different types of related information about the purchase of goods and services by visitors. The Bureau of Economic Analysis (BEA), which now provides annual and quarterly estimates of travel and tourism at the national level, describes a Travel and Tourism Satellite Account (TTSA) as "present(ing) a rearrangement of information from the National Income and Product Accounts, from the industry accounts, and from other sources so that travel and tourism activities can be analyzed more completely than is possible in the structure of the traditional national economic accounts." Similarly, the RTIM has been developed by Dean Runyan Associates to estimate travel spending, earnings, employment, and tax receipts at the state, county, and regional levels. These initial findings can, in turn, be used as input data for deriving estimates of other economic measures, such as value-added and indirect effects.

This appendix provides an overview of the Regional Travel Impact Model (RTIM) and travel and tourism satellite accounts (TTSAs). Although there is no single or absolute form of a TTSA, the one developed by the Bureau of Economic Analysis (BEA) will be the basis of the analysis here. The definitions, framework, and estimating methods used for the U.S. BEA TTSA follow, as closely as is practicable, the guidelines for similar travel satellite accounts that were developed by the World Tourism Organization (WTO) and the Organization for Economic Co-operation and Development (OECD).

The primary focus is on the direct impacts of visitor spending. Visitors are defined as persons that stay overnight away from home, or travel more than fifty miles one-way on a non-routine trip. Only the expenditures related to specific trips are counted as visitor spending. Other travel related expenditures such as the consumption of durable goods (e.g., recreational vehicles or sporting equipment) or the purchase of vacation homes are not considered.

While such a definition of the travel industry (i.e., the trip related expenditures of visitors) is conservative, it is also in keeping with the notion of the travel industry as being an export-oriented industry for specific local communities. That is, visitors are important to regions because they inject money into the local economy. This focus on the export-oriented nature of the travel industry for local communities becomes blurred if the industry is defined so as to include non-trip related expenditures.

<sup>&</sup>lt;sup>1</sup> Peter D. Kuhbach, Mark A. Planting, and Erich H. Strassner, "U.S. Travel and Tourism Satellite Accounts for 1998-2003," Survey of Current Business 84 (September 2004): 43-59.

## PRIMARY CONCEPTS, CATEGORIES & DATA REQUIREMENTS

There are three primary types of information that are measured and/or estimated in a travel industry account. The first is a measure of the *travel industry* in terms of both the characteristics of the business firms that sell travel goods and services and the characteristics of consumers that purchase travel industry goods and services. The second is a measure of the *demand segments* that consume travel industry goods and services. For example, the distinction between business and leisure travel is a measure of demand segments. The third is a measure of the *components of economic output* associated with the travel industry. The employee earnings generated by visitor spending is one such component. Travel-generated tax receipts are another. These three categories of information represent different aspects of the accounting ledger – they represent different ways of viewing or analyzing the travel industry.

The bulk of this paper will discuss these three types of information in terms of their conceptual foundations, the data requirements, and some of the more salient issues that users of this information should be aware of. There will also be some discussion of *indirect and induced effects* in that these effects can be reasonably estimated from the direct travel industry accounts. These secondary (versus direct) effects describe the relationship of the travel industry to other sectors of the larger economy.

The intent of this discussion will be to provide a general overview of the process of constructing travel industry accounts and the underlying similarity between the RTIM and a TTSA. More technical issues are generally placed in footnotes.

## **TRAVEL INDUSTRY**

Defining the travel industry is probably the most critical and data intensive effort involved in developing a travel industry account. It is an exercise in matching supply (sellers of goods and services) with demand (the travelers that purchase those particular goods and services). It is complicated by the fact that no single industrial classification scheme provides a valid measure of the travel industry. There are only three significant industrial classifications (Accommodations [NAICS 721], Scheduled Passenger Air Transportation [NAICS 481111] and Travel Arrangement and Reservation Services [NAICS 5615]) that *primarily* sell travel industry goods and services. Firms in other industries (retail, recreation, transportation) provide goods and services to both travelers and other types of consumers.

Because of this, most satellite accounts, as well as the RTIM, incorporate at least some information about the expenditures of visitors in order to define the supply of visitor industry firms. For example, if there is an estimate of visitor-days and an estimate of how much the average visitor spends on food services per day, then an estimate of visitor spending on food services can be calculated. In most cases, this will be only a

<sup>&</sup>lt;sup>2</sup> The North American Industrial Classification System (NAICS) is the current standard in the United States.

<sup>&</sup>lt;sup>3</sup> Even these industries are not purely travel. For example, the accommodations industry provides services to local residents (food service and meeting rooms). Passenger airlines also ship cargo on the same planes that carry passengers. Fortunately, it is usually possible to make adjustments for these non-travel components through the use of additional data.

fraction of all food service sales in that residents are a larger market for most restaurants.<sup>4</sup>

The industry sectors that are usually matched to visitor spending in this way are: accommodations (NAICS 721), food service (722), arts, entertainment and recreation (71), and retail trade (44-45). A portion of transportation business is also part of the travel industry for obvious reasons.

In the case of the transportation sector, the definition and measurement of the travel industry component is more complicated because most transportation spending by visitors involves travel to and from the destination, rather than travel at or within the destination market. This is not an issue if the geographic scope of the travel industry market includes the origin and destination of travel. National travel industry accounts thus include all domestic passenger air transportation in the travel industry. The issue is more complicated at the state or regional level, however. Suppose, for example, that the focus of a travel industry account is the state of Arizona. How should the purchase of a round trip airline ticket by a Chicago resident traveling to Phoenix be treated in that only some of the economic impact of this spending will occur in Arizona? A reasonable approach would be to allocate only a portion of this spending (and related payroll, taxes, etc.) to Arizona and ignore the remainder for the purpose of creating a travel industry account for Arizona. However, if this procedure were followed for every state, the sum of the state accounts would be less than the national travel account. The state accounts would be additive if outbound air travel from each state were included. However, this is methodologically inconsistent with the construction of a national account, which does not include outbound travel as a component of domestic tourism demand. The approach used in the RTIM is to make a distinction between the *visitor* industry, that includes only visitor demand, and the travel industry, which includes visitor demand and that portion of outbound travel that can be attributed to the resident economy. For example, the passenger air transportation employment in Arizona can be divided between three groups of travelers: inbound, outbound, and pass-through. Only that employment attributable to inbound travel is part of the Arizona *visitor industry*. Employment attributable to outbound and pass-through travelers is included with the larger travel industry.<sup>5</sup>

The following two tables display the specific industries that are included in the travel industry for the BEA's national TTSA and the RTIM. Although not identical, the industries are equivalent with only a few exceptions.<sup>6</sup>

<sup>&</sup>lt;sup>4</sup> The proportion can vary enormously among regions and localities, however. In many popular visitor destinations, the primary market for food service will be visitors. It should also be noted that even with reliable visitor survey data; there is still the issue of how to translate spending on food service *commodities* to the supply of food service by *industry*. As indicated in the footnote above, food service is also supplied by the accommodation industry.

<sup>&</sup>lt;sup>5</sup> The same issue arises with travel agencies and reservation services (NAICS 5615). Most of these services are probably related to outbound travel and are treated as such in the RTIM.

<sup>&</sup>lt;sup>6</sup> The major exception is that the BEA includes the production of consumer non-durables that are sold through retail outlets. This is not a major component and would be even less so at the level of the state.

#### **DEMAND SEGMENTS**

The distinction between inbound and outbound travel has already been discussed in the previous section and in terms of the concepts of the *visitor industry* and the *travel industry*. Three other types of demand segments that are related exclusively to the *visitor industry* will be discussed here. The first two demand categories are reported by the BEA in their national TTSA. They are: *leisure versus business travel*, and *resident versus non-resident travel*. The third demand category is typically reported in the RTIM: *type of traveler accommodation*. These three demand categories will be discussed in turn.

The distinction between *leisure versus business travel* is useful for several reasons. Economists like to distinguish between personal consumption expenditures on the one hand and business expenditures on the other. Indeed, this distinction is central for the National Income and Product Accounts (NIPAs). Those in the travel industry are more likely to be interested in this distinction because leisure travelers represent a more "marketable" segment because their travel choices are less determined by economic and business factors. Futhermore, business and leisure travelers tend to have different spending profiles. The availability of this information in either a state or regional TTSA or RTIM is essentially dependent on the availability of survey data (as it is at the national level). It should be noted, however, that such estimates are considerably less reliable for smaller geographic areas because of the limitations of survey data. Even at the state level, year-to-year changes in the composition of this demand segment should be interpreted in conjunction with other data.

The distinction between *resident versus non-resident travel* is fundamental to a national TTSA because it mirrors the distinction between the domestic economy and international transactions. Non-resident travel in the United States is considered an export in the official international transaction accounts.<sup>7</sup> The distinction is obviously also important because it is based on different political, legal, and currency regimes – factors that in themselves influence travel behavior. At the level of the state or region, the distinction between resident and nonresident travel is less important, although it is often reported.<sup>8</sup> There are at least two reasons why this distinction is less useful at state and regional levels.

First, there is considerably less of an economic rationale for distinguishing resident and non-resident travel at the level of the state, or any other political jurisdiction within the United States, than there is at the national level. States do not maintain interstate trade balance sheets that chart the flow of goods and services across state boundaries. From an economic point of view, the administration of the tax system is the primary, if only,

<sup>&</sup>lt;sup>7</sup> Conversely, the spending of U.S. visitors in other countries is treated as an import in the international transaction accounts.

<sup>&</sup>lt;sup>8</sup> The issues discussed with regard to the reliability of survey data for leisure versus business travel also applies to this category

reason for this distinction. In the case of travel and tourism, the evaluation of the tax impacts of resident versus nonresident travel might also be important.<sup>9</sup>

Second, travel is behaviorally defined by length of distance from home (usually at least 50 miles one-way), trip purpose (non-routine), and/or the use of an overnight accommodation away from home. Rarely is domestic travel defined by virtue of crossing a geographic boundary. The operators of tourist attractions in local communities are generally less interested in the origin of visitors than in the revenue that they generate for their businesses. In terms of the economic impacts at the *local* level, the distinction between in-state residents, out-of-state residents and international visitors may not be relevant other than for the purpose of marketing. However, other geographic characteristics of the visitor (e.g., distance traveled, the specific area of origin) are generally more useful measures of the visitor market than whether the visitor is a resident or nonresident.

Finally, the distinction among different *types of traveler accommodations* is generally reported in the RTIM. Typically, these categories are:

- Visitors who stay in hotels, motels, B&Bs., and similar lodging facilities
- Visitors who stay at campsites
- Visitors who stay in the private homes of friends or relatives
- Visitors who stay in vacation or second homes
- Visitors who do not stay in overnight accommodations on their trip away from home (day visitors).

These distinctions can be useful because estimates of economic impacts are often used for different purposes. The total of all accommodation types, of course, is an estimate of the total magnitude of the visitor industry. Visitors who stay in commercial lodging such as hotels and motels are most likely to have the greatest economic impact on a personday basis. These visitors are also more likely to be influenced by marketing efforts. In urban areas, a large proportion will represent business travel. In other words, the type of accommodation category can be used in conjunction with other types of data to analyze the market characteristics of visitors.

<sup>&</sup>lt;sup>9</sup> Nonresident visitors who pay taxes in their destination state represent an unambiguous gain for the state. This effect is less clear for resident travelers within the state.

<sup>&</sup>lt;sup>10</sup> In essence, state level travel impact estimates really represent an aggregation of smaller geographic units, such as counties or regions. Populous states with large landmasses (e.g., California or Texas) will have a higher proportion of resident travel than small states (e.g., Rhode Island or Delaware).

## **INDIRECT, INDUCED AND SECONDARY EFFECTS**

To this point, the discussion of travel industry accounts has referred only to the direct output components. That is, the ripple effects of the re-spending of travel industry receipts throughout the larger economy have not been analyzed. The structure of both the TTSA and the RTIM permit such analysis.

- **Indirect** effects refer to the intermediate inputs used to produce the final product or service, providing that those inputs are themselves produced within the designated geographic area.
- **Induced** effects refer to the purchase of goods and services by *employees* that are attributable to direct and indirect impacts. These induced impacts are derived from economic data that describe the purchasing patterns of households. For example, employees of all the designated export-oriented industries will spend their income on food, household durables, health care, and so on.
- The sum of indirect and induced impacts is sometimes referred to as the **secondary** effect. These secondary impacts may be as great as or greater than the direct impact alone.
- The ratio of the total effects (direct plus indirect, induced, or secondary) to the direct effects is the **multiplier**.

The BEA reports the **indirect** components of economic output. This is equivalent to domestic travel spending less the goods and services imported from abroad to meet domestic demand. For travel, these imports would include souvenirs manufactured in China and petroleum extracted in Saudi Arabia. The indirect output multiplier for 2002 was 1.76. The ratio of domestic travel spending to travel industry value-added was 1.88. The difference reflects the intermediate inputs for travel imported from abroad.

At the state level, these indirect output multipliers are typically lower because relatively more of the intermediate inputs are purchased from outside of the state. At the county or metropolitan level, the multipliers are generally even lower for the same reason. Furthermore, the estimates are usually less reliable because of the data limitations of the regional input-output model used to estimate the indirect effects.

The BEA does not report **induced** effects – the effect of household spending of the direct and indirect labor income. Typically, these induced effects will be larger than the indirect effects at the state or regional level, in part because they are based on both the direct and indirect components.<sup>11</sup> As with indirect effects, the induced effects will also tend to be lower for smaller economic areas and the reliability of the estimates will be less.

Secondary effects should be interpreted cautiously. These effects describe the relationship of economic transactions at a point in time. These relationships will not necessarily remain constant with a change in direct economic output. This is because

 $<sup>^{11}</sup>$  The induced effects can be estimated with the Implan model maintained by the Minnesota Implan Group.

all economic resources have alternative uses. Because of this, it is often difficult to determine the effect of an increase or decrease in visitor spending on the larger economic system over time.

# THE REGIONAL TRAVEL IMPACT MODEL AND TRAVEL & TOURISM SATELLITE ACCOUNTS COMPARED

This appendix has provided an overview of Dean Runyan Associates RTIM and the Bureau of Economic Analysis' domestic TTSA. These travel industry accounts are similar in terms of how they define the travel industry and the measures of the industry that are reported. The differences stem largely from their different levels of analysis – the BEA provides estimates at the national level only, while the RTIM's are typically constructed on a state or regional level. Because of this geographic focus, the RTIM provides a distinction between the visitor industry and the travel industry. The RTIM also provides measures of all of the components of economic output and secondary effects at the state or large region level. At smaller units of analysis, however, the emphasis is on earnings and tax receipts generated by travel spending as these are the most reliable and meaningful measures of the economic impact of travel at the local level.

#### IMPLAN MODELING SYSTEM 1

IMPLAN is a widely used, nationally recognized economic impact model, first developed by the U.S. Forest Service. IMPLAN provides estimates of the additional economic activity associated with a sale of a good or service to a traveler. This methodology has been packaged, along with the necessary data files, as IMPLAN Pro by the Minnesota IMPLAN Group, Inc. (MIG) of Stillwater, Minnesota, and is the basis for the analysis in this report. Some of the conventions used by IMPLAN follow.

#### **DATABASE COMPONENTS**

The IMPLAN databases consist of two major parts: 1) national-level matrices and tables and 2) economic and physical data at the county and/or state level. The national matrices are combined with regional data to create a regional model which can be edited to reflect local conditions.

The IMPLAN data is divided into four main categories:

- 1. Industry Output
- 2. Employment
- 3. Value Added (includes employee compensation)
- 4. Final Demands

**Industry output** represents the dollar value of an industry's total production. The data is derived from a number of sources including Bureau of Census economic censuses and the BLS employment projections.

**Employment** is listed as a single number of jobs for each industry. The data is derived from ES202 employment security data supplemented by county business patterns and Regional Economic Information System (REIS) data. All IMPLAN databases (after 1985) include both full-time and part-time workers in employment estimates.

Value Added includes employee compensation, proprietor income, other property type income, and indirect business taxes. Employee compensation includes the total payroll costs (including benefits) of each industry in the region. Proprietary income consists of payments received by self-employed individuals (includes private business owners, doctors, and lawyers). Other property type income consists of payments from rents, royalties, dividends, and interest. Indirect business taxes consist primarily of excise and sales taxes paid by individuals to businesses.

<sup>&</sup>lt;sup>1</sup> Minnesota IMPLAN Group, Inc., "Micro IMPLAN Users Guide", version 91-F, March 1994.

**Final Demands** are the dollar value of goods and services purchased by consumers and institutions (federal, state, and local government). Personal consumption expenditures are the largest component of final demand. It consists of payments by individuals/households to industries for goods and services used for personal consumption. IMPLAN final demands are measured in terms of producer prices.

#### **MULTIPLIERS**

Each industry that produces goods and services generates demands for other goods and services. These other producers, in turn, purchase goods and services. These indirect purchases (indirect effects) continue until "leakage" from the region (imports, wages, profits, etc.) stop the cycle. These iterations are described by multipliers.

Each of these multiplier types can be calculated for output, employment, and income (value added).

**Output multipliers** are derived by dividing the total (direct, indirect, and induced) output effects by the direct output. An output multiplier provides an indicator of the total output created (direct, indirect and induced) for each dollar of direct output.

**Income multipliers** (or any of the value added components) are derived by dividing the total (direct, indirect, and induced) income effects by the direct income. An income multiplier provides an indicator of the total income created (direct, indirect and induced) for each dollar of direct income.

**Employment multipliers** are created in the same manner as the income multiplier, but using employment rather than income. An employment multiplier provides an indicator of the total jobs (direct, indirect and induced) for each direct job.

#### WYOMING DATA AND ANALYSIS CONVENTIONS

All impact amounts are expressed in 2014 dollars using IMPLAN deflators based on the U.S. Bureau of Labor Statistics' Consumer Price Index.

Through IMPLAN, direct employment from the RTIM model was used to estimate all of the associated indirect and induced effects. Employment associated with retail trade was evenly divided between general merchandise stores (sic 53) and miscellaneous retail (sic 59). Employment associated with ground transportation was divided between auto rental, gasoline service stations, and local transportation based on the expenditure distribution data used for the RTIM model.

## **Industry Groups for Secondary Impacts**

#### **Accommodation & Food Services**

Food services and drinking places

Hotels and motels, including casino hotels

Other accommodations

#### **Arts, Entertainment & Recreation**

Bowling centers

Fitness and recreational sports centers

Independent artists, writers, and performers

Museums, historical sites, zoos, and parks

Other amusement, gambling, and recreation industries

Performing arts companies

Promoters of performing arts and sports and agents for public figures

Scenic and sightseeing trans and support activities for transportation

Spectator sports

## Wholesale & Retail Trade

Building material and garden supply stores

Clothing and clothing accessories stores

Electronics and appliance stores

Food and beverage stores

Furniture and home furnishings stores

Gasoline stations

General merchandise stores

Health and personal care stores

Miscellaneous store retailers

Motor vehicle and parts dealers

Nonstore retailers

Sporting goods, hobby, book and music stores

Wholesale trade

#### **Transportation**

Air transportation

Automotive equipment rental and leasing

Automotive repair and maintenance, except car washes

Couriers and messengers

Rail transportation

Transit and ground passenger transportation

Travel arrangement and reservation services

Truck transportation

Warehousing and storage

Water transportation

#### **Professional Services**

Accounting and bookkeeping services

Advertising and related services

All other miscellaneous professional and technical services

Architectural and engineering services

Book publishers

Cable networks and program distribution

Child day care services

Civic, social, professional and similar organizations

Colleges, universities, and junior colleges

Computer systems design services

Custom computer programming services

Data processing services

Database, directory, and other publishers

Elementary and secondary schools

Environmental and other technical consulting services

Grantmaking and giving and social advocacy organizations

Home health care services

Hospitals

Information services

Legal services

Management consulting services

Management of companies and enterprises

Motion picture and video industries

Newpaper publishers

Nursing and residential care facilities

Offices of physicians, dentists, and other health practitioners

Other ambulatory health care services

Other computer related services, including facilities management

Other educational services

Periodical publishers

Photographic services

Radio and television broadcasting

Religious organizations

Scientific research and development services

Social assistance, except child day care services

Software publishers

Sound recording industries

Specialized design services

**Telecommunications** 

Veterinary services

#### **Other Services**

**Business support services** 

Car washes

Commercial machinery repair and maintenance

Death care services

Drycleaning and laundry services

Electronic equipment repair and maintenance

**Employment services** 

Facilities support services

General and consumer goods rental except video tapes and discs

Household goods repair and maintenance

Investigation and security services

Lessors of nonfinancial intangible assets

Machinery and equipment rental and leasing

Office administrative services

Other personal services

Other support services

Personal care services

Private households

Services to buildings and dwellings

Video tape and disc rental

Waste management and remediation services

#### Government

Federal electric utilities

Federal Military

Federal Non-Military

Other Federal Government enterprises

Other State and local government enterprises

Postal service

State & Local Education

State & Local Non-Education

State and local government electric utilities

State and local government passenger transit

#### Construction

Commercial and institutional buildings

Highway, street, bridge, and tunnel construction

Maintenance and repair of farm and nonfarm residential structures

Maintenance and repair of highways, streets, bridges, and tunnels

Maintenance and repair of nonresidential buildings

Manufacturing and industrial buildings

New farm housing units and additions and alterations

New multifamily housing structures, nonfarm

New residential 1-unit structures, nonfarm

New residential additions and alterations, nonfarm

Other maintenance and repair construction

Other new construction

Water, sewer, and pipeline construction

## Finance, Ins., & Real Estate

Funds, trusts, and other financial vehicles

Insurance agencies, brokerages, and related

Insurance carriers

Monetary authorities and depository credit intermediation

Nondepository credit intermediation and related activities

Real estate

Securities, commodity contracts, investments

## Mining & Manufacturing

all mining & manufacturing industries except for food processing

## **Agriculture & Food Processing**

farming & manufacturing industries in food processing
